#### DIEK CONCIDEDATION

Possibility of Loss Upon Maturity: Unless specifically stated in the terms of the structured note, most notes do not provide 100% principal protection. An investor may incur a loss of principal, even if the notes are held to maturity. Tax Treatment: The tax treatment of structured notes may be uncertain. It's important to consult a tax advisor regarding the U.S. federal income tax implications of an investment in a structured note. Liquidity Risk: Liquidity risk will exist if the issuer chooses not to maintain a secondary market. Available liquidity may vary by issuer. Some issuers may maintain daily liquidity while others may be more limited. Early withdrawal is generally not permitted. Secondary Market Risk: Investors who sell notes prior to maturity are subject to secondary market risk, including the risk of loss, as the market price may be less than the initial principal. Factors that determine secondary market pricing may include, but are not limited to, supply and demand, general market conditions, then-current interest rates the level liquidity and volatility of any relevant index and time remaining until maturity.

These factors differ from the parameters used to calculate the note's final return at maturity. Therefore, secondary market pricing may not be equivalent to are turn determined by the calculation method used at maturity. Credit Risk: Investors are dependent on the note issuer's ability to pay all amounts due on the structured notes. Any actual or potential change in the issuer's credit worthiness or credit spreads is likely to adversely affect the value of a structured note. If the issuer defaults on its payment obligations, investors may not receive any amounts owed under the structured notes and could lose their entire investment. Call Risk: Certain notes may be callable automatically or at the option of the issuer. If a note is called, the investor will not receive any interest payments that would have been payable for the remainder of the term of the note. Opportunity Costs: The opportunity cost of investing in notes can be defined as the forgone "risk-free rate of return" that would be received if the principal was invested in other fixed-income investments. No Early Redemption: Notes should be purchased with the intention of holding them until maturity. Some note may offer an early redemption opportunity, allowing holders the option to redeem prior to maturity. A secondary market for the notes may develop, although there is no guarantee that any person will maintain a secondary market. The value of the notes sold prior to maturity in the secondary market will be subject to then prevailing market conditions and may include a transaction charge. The sale proceeds may be less or more than the original purchase amount paid. FDIC Insurance: Structured notes are not FDIC insured. 											Since Inception Total Return		77.97%	

\*All of the growth and income included for each month was earned, but not necessarily paid, in that month. All capital appreciation is being shown in the month that the maturity or early liquidation occurred, and does not reflect daily price fluctuations. Yearly returns are time weighted and are calculated with the following formula. Sum of (1+a month's Return as a %) times (1+the following month's Return as a percent. This is done for every month of the year, minus 1 at the conclusion of the year. Total Return is calculated similarly, but for each month over the life of the investment and not limited by individual years. The figures shown in the income portion are exclusive of fees earned by Ancorato, as fees are taken from the income portion of the investment. The monthly total return value is calculated by adding month's income and capital appreciation.

10 Example High-Income Notes in Porfolio*(List is not all inclusive)												
Underliers	Rate	Duration (Months)	Date Purchased	Principal Protection	Coupon Protection	Issuing Bank	Special Feature					
Darling Ingredients/Intel Corp/JB Hunt Transport	24.00%	18	6/10/24	40.00%	30.00%	JP Morgan	N/A
